

ILS Technology Announces Partnership with DataMain International to Provide Remote Monitoring and Managed Solutions to Transport Security Equipment Market.

Centralized and Vendor Neutral Transport Security Asset Management

BOCA RATON, Fla. – October 30, 2009 – ILS Technology, LLC, an industry leader in enabling intelligence through connectivity, and DataMain INTERNATIONAL, Inc, a Transport Security (TranSec) interoperability solutions provider, today announced a strategic alliance to offer integrated solutions for the monitoring and management of transport security equipment.

ILS Technology develops software and solutions that allow product manufacturers and support personnel to directly link intelligent remote devices with management applications and databases, enabling deeper insights into operational performance and productivity. ILS Technology allows Service Providers to leverage their investment and expertise in existing back-office network management tools, and extend their use seamlessly to remotely located devices behind firewalls, without risk to security or regulatory compliance requirements.

DataMain INTERNATIONAL assists its customers in securing the safety of the world's traveling public by providing leading-edge interoperability solutions adapted and tested to meet the requirements of mission-critical security applications. DataMain INTERNATIONAL provides secure remote access to monitor and manage transport security assets without modification to vendor equipment or software. These non-intrusive solutions enable diverse systems to work together, linking a variety of vendors' equipment and support organizations through a Network Operating Center (NOC).

"Through this partnership, DataMain INTERNATIONAL can now offer customers a complete end-to-end, vendor neutral asset management strategy," said Fred Yentz, president and CEO of ILS Technology. "The combination of DataMain INTERNATIONAL expertise in transport security equipment with ILS Technology's secureWISE™ and deviceWISE™ solutions allows both internal and the OEM support organizations robust remote monitoring and maintenance of critical security system, enabling early detection and faster response to problems that could affect the availability of these mission critical assets."

"With over 100 years combined experience in the transportation security industry, we understand the importance of continued operation, availability and secure, centralized management of security assets." said Andrea Whitson, president of DataMain INTERNATIONAL "Our partnership with ILS technology is a key component in our ability to provide practical solutions targeted at our customers' needs."

About ILS Technology

ILS Technology, LLC, provides software technology and services that change the way companies share information – within their own operations and their end-to-end supply chain. The company's solutions, including software as a service, enable secure and collaborative connections between intelligent devices in production environments, across

enterprises and between businesses. Offering broad applicability in a wide array of industries, ILS Technology's offerings have been field-proven in markets where the protection of intellectual property is crucial and the ability to share information from any point around the world in real time is paramount. Solutions developed by ILS Technology adhere to demanding industry standards and are adaptable to virtually any technology platform regardless of vendor. For more information, visit <http://www.ilstechnology.com>.

ILS Technology is a wholly owned subsidiary of Park-Ohio Holdings Corp. (<http://www.pkoh.com>), a leading provider of supply chain logistics services and a manufacturer of highly engineered products for industrial original equipment manufacturers.

About DataMain International

DataMain INTERNATIONAL, Inc., the TranSec interoperability provider, assists its customers in securing the safety of the world's traveling public. DMI provides leading-edge interoperability solutions adapted and tested to meet the requirements of mission-critical security applications. Our solutions include secure communications, configuration and Threat Image Projection (TIP) management from a Network Operations Center (NOC).
